

How-To Guide

Install the Logcollect Sensor on a Non-English System

Publication Date

Nov 18, 2025

Abstract

This document provides instructions to deploy and configure Logcollect agents or sensors on a non-English system.

Note:

The screen/figure references are only for illustration purpose and may not match the installed product UI.

Scope

The Configuration details in this guide are consistent with Logcollect agents or sensors.

Audience

This guide is for the administrators responsible for investigating and managing network security.

6.1	Configurations on Agent System	14

1 Overview

This document provides detailed instructions to configure the Logcollect Agent/Sensor to send the logs to the Logcollect server in the English language, where the source of the event is a non-English system/application.

2 Prerequisites

The agent system must have the English language pack installed.

3 Logcollect Manager Installation on a Non-English System

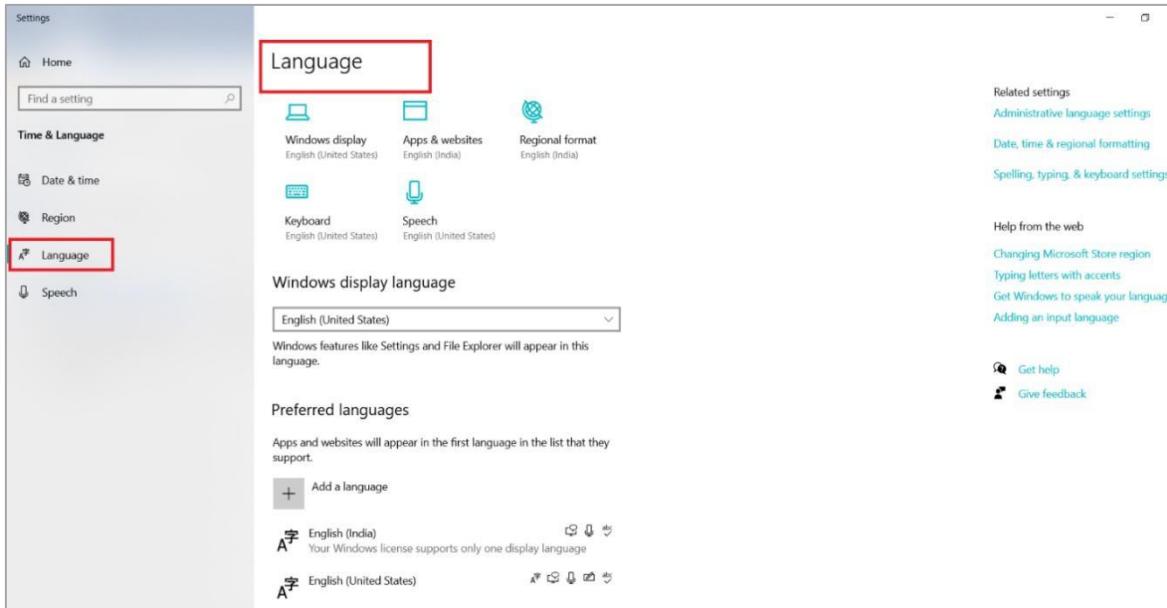

3.1 Installing the English Language Pack

The following steps describe the procedure to install the English language pack in Windows 10/Windows Server 2012/ Windows 2012 R2/ Windows Server 2016/ Windows Server 2019.

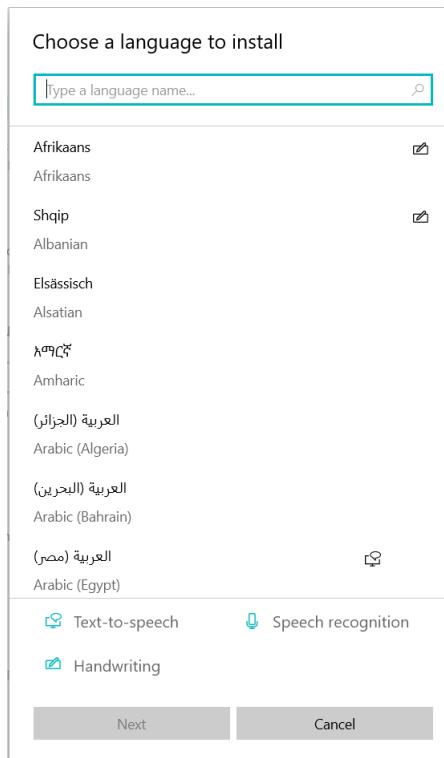

1. In the Windows search bar, search for **Language Settings**, and open it.

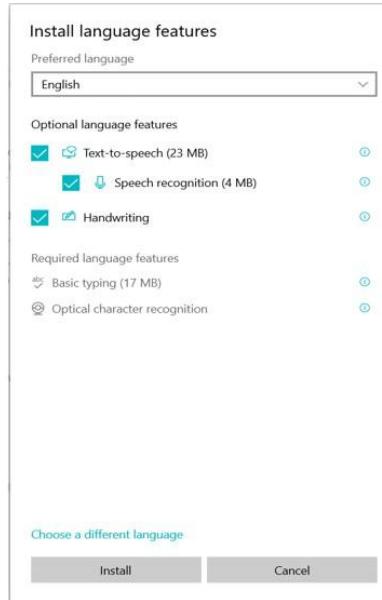

2. The page will be displayed as shown below:

3. Click **Add a language** to add a language. Select the language (English) and click **Next**.

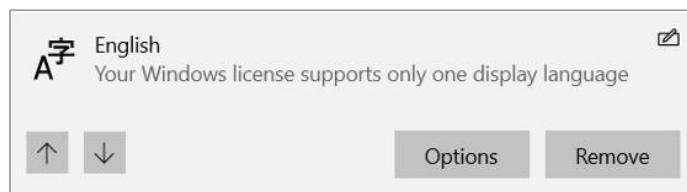

4. Click **Install**. The selected language starts installing.

Note

You may click **Options** to check the language pack installation status.

5. To set the newly selected language as the display language, move it to the top of the list by clicking the  arrow.
6. Restart the computer for the changes to take effect.

3.2 Installing English Language Pack on Windows 7/ Windows 2008/ Windows 8.1

1. Open the **Control Panel** and select **Regional and Language Options**.
2. In the **Formats** tab, select **English (United States)** as language from the **Current format** dropdown.
3. Click the **Administrative** tab.
4. In the **Reserved Accounts** pane, click the **Copy to Reserved Accounts** button.
5. Select the **System accounts (local system, local service, and network service)** option, and then click the **OK** button.
6. In the **Regional and Language Options** dialog box, click the **Apply** button, and then click the **OK** button.

Restart the computer for the changes to take effect.

3.3 Installing SQL Server Express

1. While installing SQL Server Express, set the default language as **English**.
2. Also, set the default language as English for the Service account, NT Authority/System, Local administrators, and LCAdmin.
3. Please click [here](#) to read about the Logcollect installation prerequisites and the installation process in detail.

4 English Language Pack Download Links

Download the English language pack for the respective operating systems from the following table.

Microsoft Windows Operating Systems	Links to Download the English Language Pack
Windows 7	<p>Install the English language pack on the system using the below link.</p> <p>http://support.microsoft.com/kb/972813 or</p> <p>https://support.microsoft.com/en-us/windows/language-packs-for-windows-a5094319-a92d-18de-5b53-1fcf697cfca8#ID0EBBD=Windows_7</p>
Windows 8/8.1	<p>Install the English language pack on the system using the below link.</p> <p>https://support.microsoft.com/en-us/windows/language-packs-for-windows-a5094319-a92d-18de-5b53-1fcf697cfca8#ID0EBBD=Windows_8.1</p>

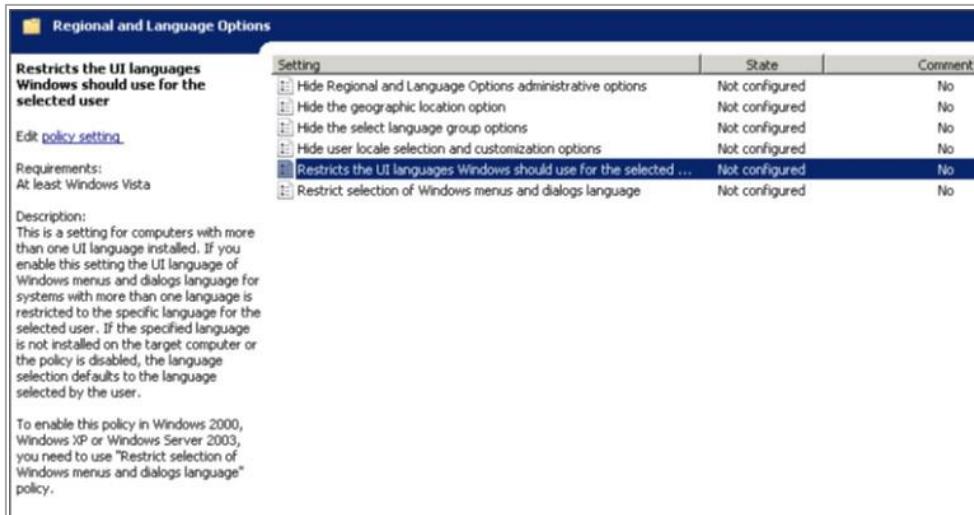

Windows 10	Install the English language pack on the system using the below link. https://support.microsoft.com/en-us/windows/language-packs-for-windows-a5094319-a92d-18de-5b53-1fcf697cfca8#ID0EBBD=Windows_10
Windows 11	Install the English language pack on the system using the below link. https://support.microsoft.com/en-us/windows/language-packs-for-windows-a5094319-a92d-18de-5b53-1fcf697cfca8#WindowsVersion=Windows_11
Windows Server 2008	Note: SP2 is required for Windows Server 2008 to install the English Language pack. http://www.microsoft.com/en-in/download/details.aspx?id=3162
Windows Server 2008R2	Note: SP1 is required for Windows Server 2008R2 to install the English Language pack. https://www.microsoft.com/en-hk/download/details.aspx?id=12250
Windows Server 2012	Install the English language pack on the system using the below link. Microsoft .NET Framework 4.7.2 Language Pack on Windows Server 2012
Windows Server 2012R2	Kindly follow the instructions in the following link to set up the language pack in Windows Server 2012R2. https://learn.microsoft.com/en-us/answers/questions/340233/language-packs-for-windows-server-2016
Windows Server 2016	Kindly follow the instructions in the following link to set up the language pack in Windows Server 2016. https://learn.microsoft.com/en-us/answers/questions/340233/language-packs-for-windows-server-2016
Windows Server 2019	Note: You cannot install language packs from the Language page in the Settings app for Windows Server 2019. Kindly follow the instructions in the following link to set up the language pack in Windows Server 2019. Cannot configure a language pack for Windows Server 2019 Desktop Experience - Windows Server Microsoft Docs
Windows Server 2022	Kindly follow the instructions in the following link to set up the language pack in Windows Server 2022. https://learn.microsoft.com/en-us/answers/questions/1161457/how-to-install-language-pack-on-windows-server-202

5 Logcollect Agent Deployment through Group Policy on a Non-English System

1. Launch the **Group Policy Management** console.
2. Create a **Group Policy Object** with the following settings.
 - Enable the **Restricts the UI languages Windows** option for the selected user.
 - Restrict the users to use **English** as the language.
3. On the domain controller, launch **Active Directory users & computers** and proceed to create an OU.
4. Create a service account in the active directory with a password never expires option and move the user to the newly created OU in step 3.
5. Link the GPO object created in step 2 to the OU and enforce the GPO.
6. Make the service account as a member of the local administrator's group on the Agent system.
7. On the Agent system, change the login credentials of the Logcollect agent service to the created service account and restart the Agent service.
8. There is no need to change any regional or language settings on the agent machines.

6 Deployment Process

1. To open the Group Policy Management console, click **Start > Administrative Tools**, and then click **Group Policy Management**.
2. In the **Group Policy Management Console** tree, expand **Forest**, and expand **Domains**.
3. In the desired domain, right-click **Group Policy Objects**, and click **New**.
4. In the **New GPO** dialog box, type a name for the new GPO, and click **OK**. For example: **Logcollect Agent on Non-English System**.
5. Right-click the newly created **GPO** name and click **Edit**.
6. In the **Group Policy Management Editor**, go to Language and Regional options [**User Configuration > Policies > Administrative templates > Control panel > Regional and language options**].

Regional and Language Options

Restricts the UI languages Windows should use for the selected user

Edit policy setting

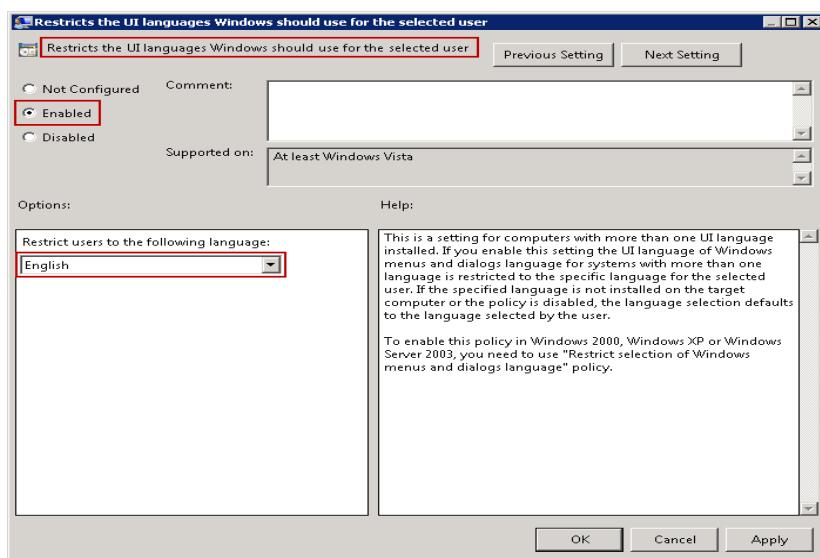

Requirements:
At least Windows Vista

Description:
This is a setting for computers with more than one UI language installed. If you enable this setting the UI language of Windows menus and dialogs language for systems with more than one language is restricted to the specific language for the selected user. If the specified language is not installed on the target computer or the policy is disabled, the language selection defaults to the language selected by the user.

To enable this policy in Windows 2000, Windows XP or Windows Server 2003, you need to use "Restrict selection of Windows menus and dialogs language" policy.

Setting	State	Comment
Hide Regional and Language Options administrative options	Not configured	No
Hide the geographic location option	Not configured	No
Hide the select language group options	Not configured	No
Hide user locale selection and customization options	Not configured	No
Restricts the UI languages Windows should use for the selected user	Not configured	No
Restrict selection of Windows menus and dialogs language	Not configured	No

7. Double-click the **Restricts the UI languages Windows should use for the selected user** option.

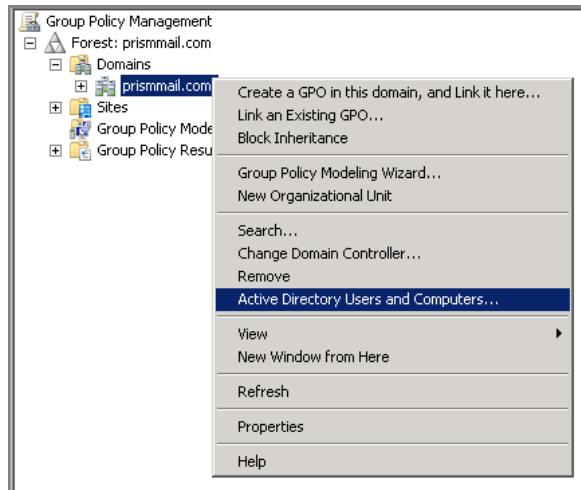

8. Click the **Enable** option.

9. Select the language as English from the **Restrict users to the following language** dropdown.

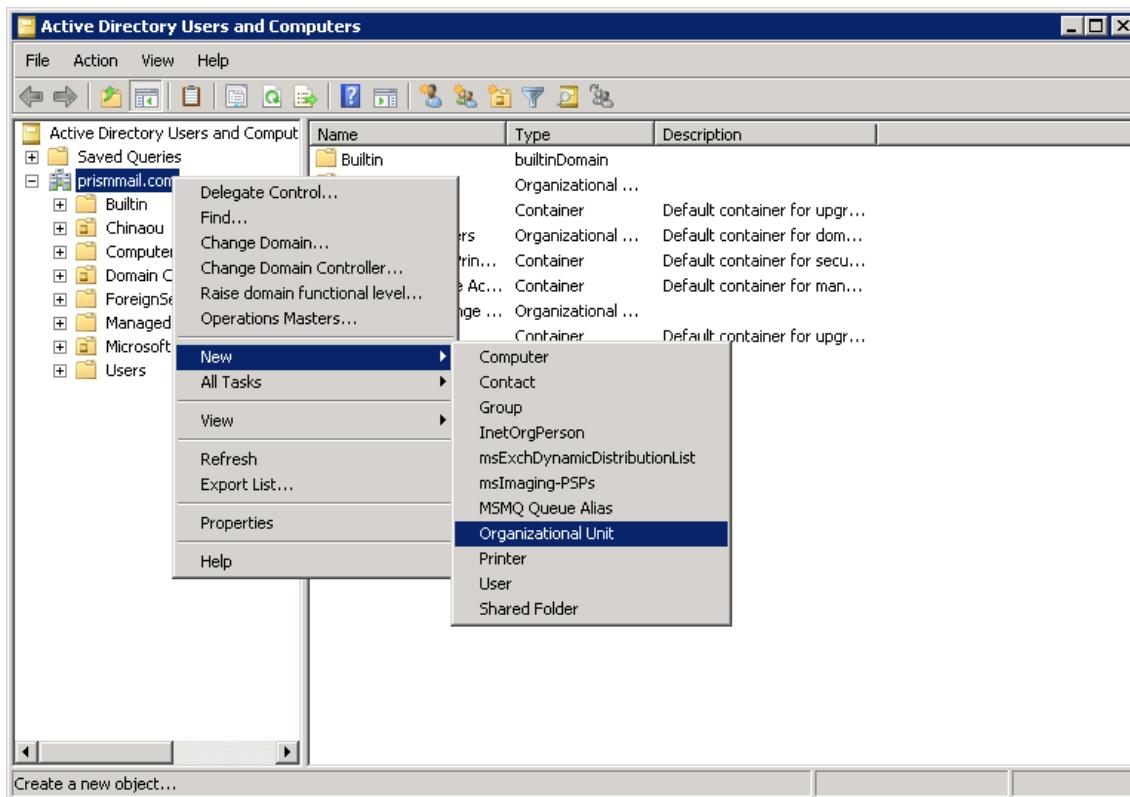

10. Click **Apply**, and then click **OK**.

On the domain controller, launch **Active Directory Users and Computers**, and proceed to create an OU.

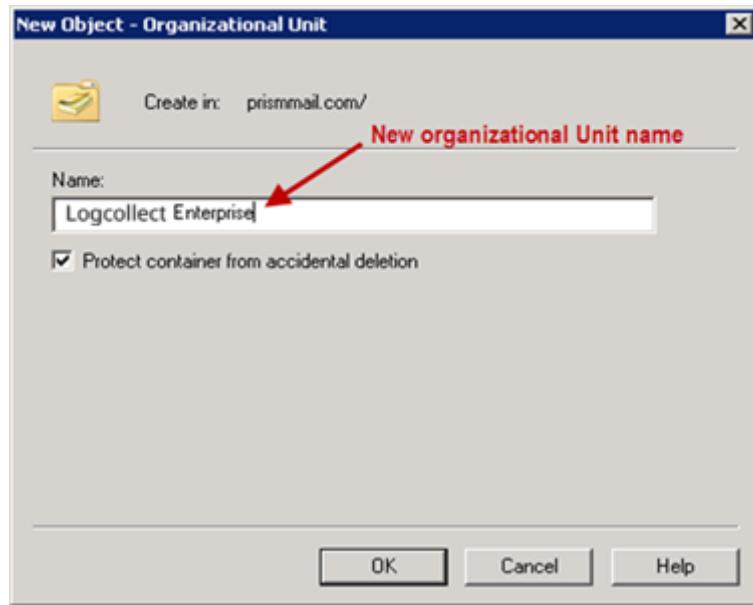

1. To open **Active Directory Users & Computers**, click **Start > Administrative Tools**, and then click **Active Directory Users & Computers**.
OR
In the **Group Policy Management**, right-click the domain controller name and then select **Active Directory Users & Computers**.

2. The **Active Directory Users & Computers** window opens.
3. In the left pane, right-click the domain controller name, click **New**, and click **Organizational Unit**.

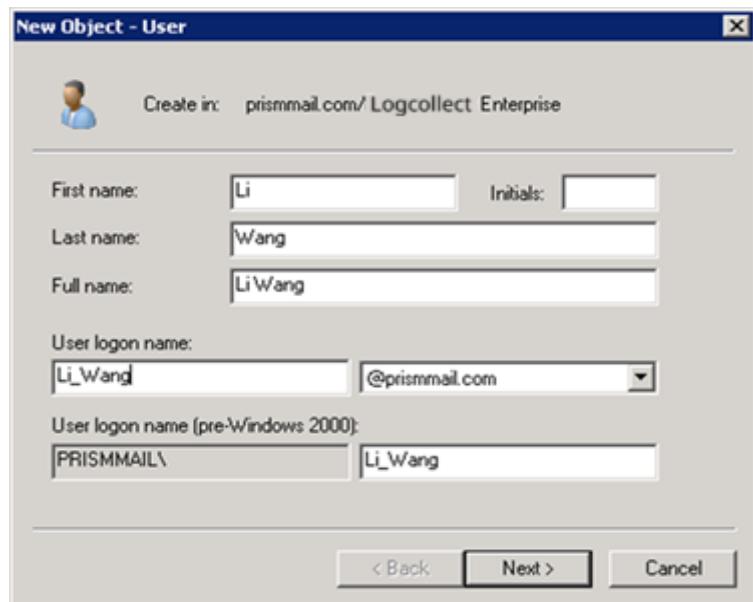

4. In the **New Object - Organizational Unit** dialog box, type the new organizational unit's name in the **Name** text field.

5. Select the **Protect container from the accidental deletion** checkbox to avoid the accidental deletion of OU. Click OK.

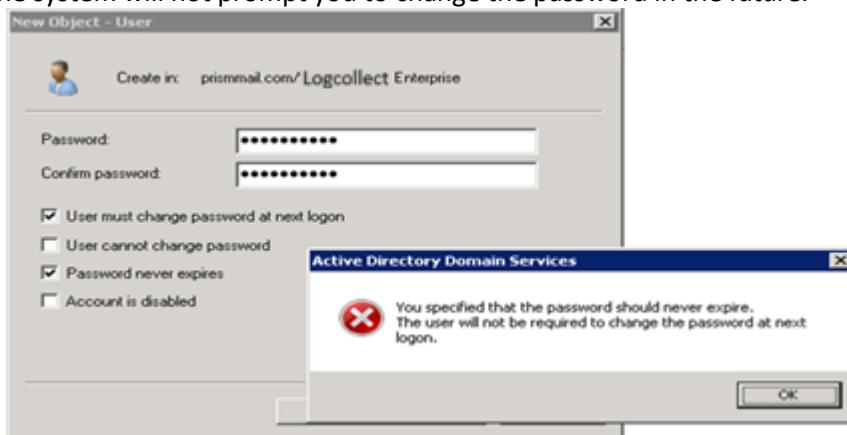

Create a service account in the active directory with a password never expires option:

1. Right-click the newly created OU (in this case, Logcollect Enterprise), click **New** and click **User**.
2. In the **New Object – User** dialog box, enter the user details.

3. Enter the appropriate **User login name** and select the **domain name** from the dropdown.
4. Click **Next**.
5. Enter the password and confirm the same.
6. Select the **Password never expires** checkbox to retain the same password even if the "**Maximum password age**" is reached (by default 42 days).

7. Once selected, the system will not prompt you to change the password in the future.

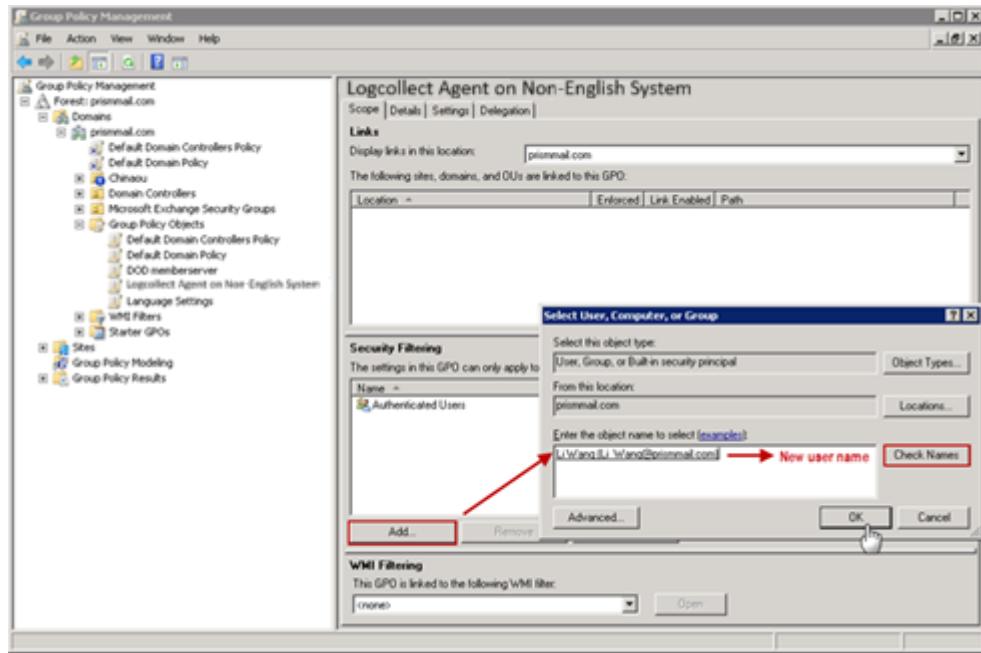

8. Click **OK** to close the message box.
 9. Click **Next**.
 10. Verify the object configuration, and then click **Finish**.

The newly created service account will be displayed under the organizational unit created earlier.

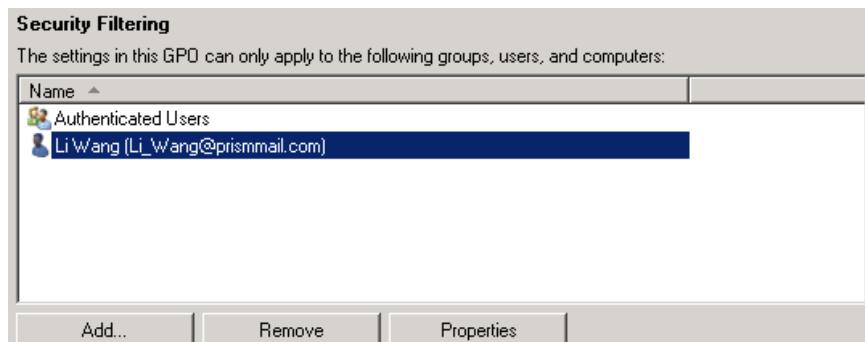

Link the group policy object created earlier to the newly created service account:

1. In **Group Policy Management**, open the GPO name created earlier.
2. In the **Security Filtering** section, click **Add**.
3. Enter the newly created partial or full username in the **Enter the object name to select** the field and click the **Check Names** button to locate all the matching or similar usernames present in the given location.

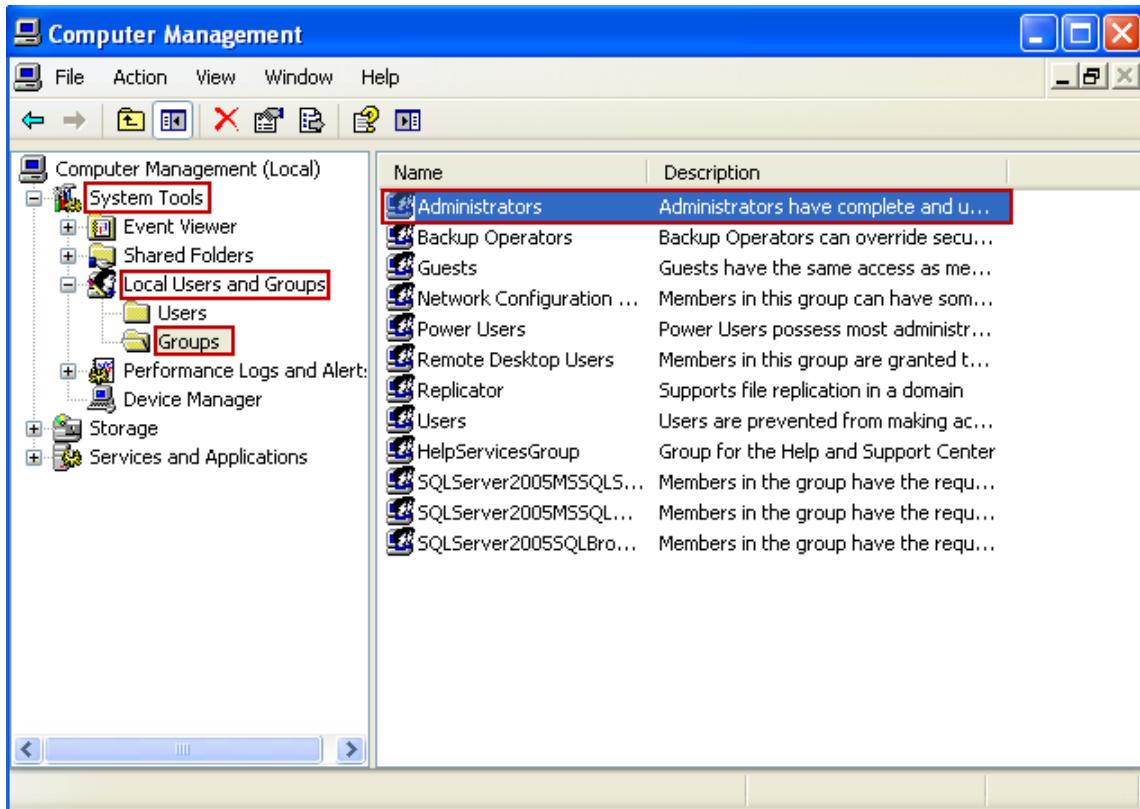

4. Once you get the desired username in the **Enter the object name to select** field, click **OK**. The username appears in the **Security Filtering** section.

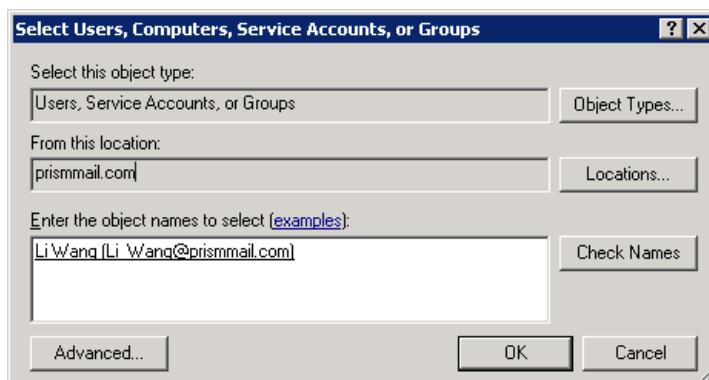

6.1 Configurations on Agent System

Make the service account a member of the local administrator's group on the Agent system:

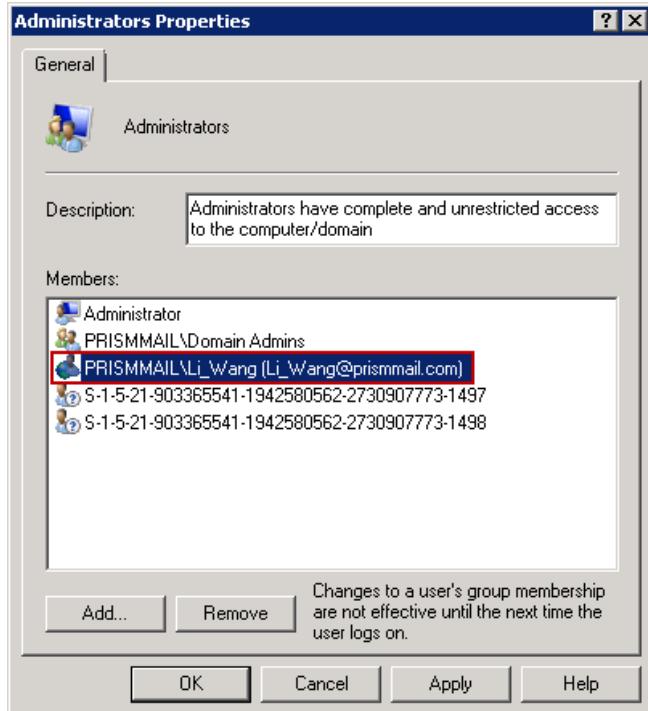

1. In the agent system, right-click **My Computer**, and click **Manage**.
2. In the **Computer Management** window, expand **System Tools > Local Users and Groups**, and select **Groups** folder.

3. Right-click **Administrators** and select **Add to Group**.
4. Click **Add** to add the newly created service account as administrator.

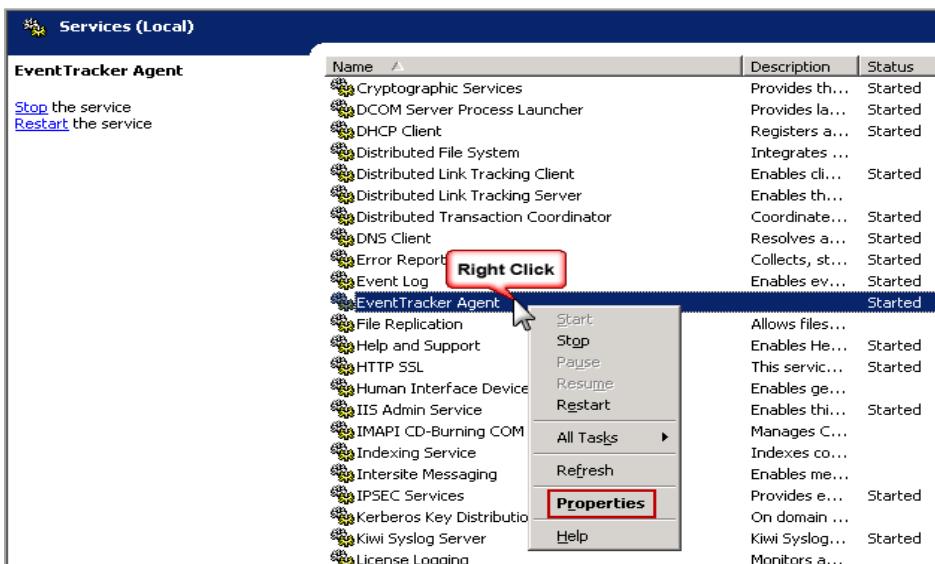

5. Enter the newly created partial or full username in the **Enter the object name to select** field and click the **Check Names** button to locate all matching or similar usernames present in the given location.
6. Once you get the desired username in the **Enter the object name to select** box, click **OK**. The service account name appears in the **Members** list of **Administrators Properties**.

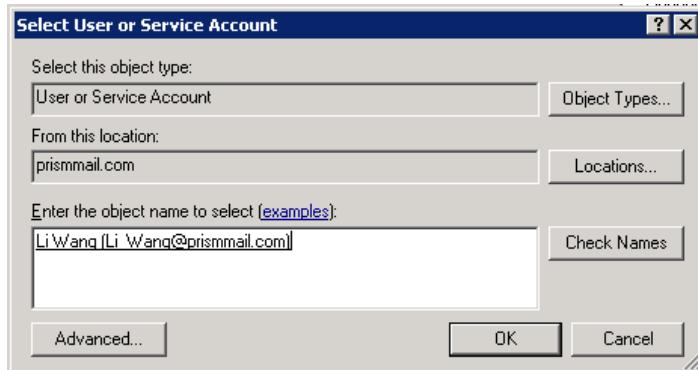

7. Click **Apply** and click **OK**.

On the Agent system change the login credentials of the Logcollect agent service to the created service account and restart the Agent service.

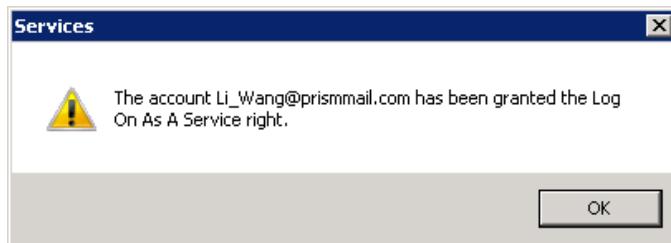

1. In the agent system, click **Start**, and click **Run**.
2. Enter **Services. msc** and click **OK**.
3. In the **Services** window, locate **EventTracker Agent**.
4. Right-click **EventTracker Agent** and click **Properties**. (Need to change this when we change the service name)

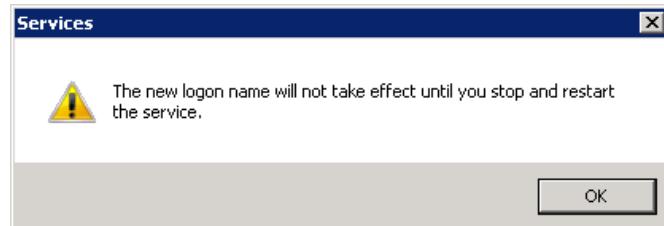

5. Click the **Log on** tab and select **This account** option.
6. Enter the newly created account name in the domain controller, enter the password, and confirm the password.

7. Enter the newly created partial or full username in the **Enter the object name to select** box and click the **Check Names** button to locate all matching or similar usernames present in the given location.
8. Once you get the desired username in the **Enter the object name to select** box, click **OK**.
9. Click **Apply** and click **OK**. You will get a confirmation message as shown below:

10. Click **OK**. The Information dialog box prompts you to stop and restart the services to activate the new login name.

11. Click **OK**.
12. Stop and then restart the **EventTracker Agent** service. (Need to change this when we change the service name)

About Logcollect

Logcollect is a software-only telemetry pipeline which supports the collection, enrichment, transformation and routing of security data from sources to multiple destinations. It is targeted to security operations that are struggling with distributing large volumes of disparate data, high operational costs, alert fatigue and missed threats. It is available as a software license or hosted in AWS. It is backed by a team that has extensive experience with security logging, SIEM and regulatory compliance. Collect once, analyze everywhere.

Headquartered in Ft. Lauderdale, FL, Logcollect is a leader in Log Collection. Learn more at www.Logcollect.com.
